SUMMARY

Frontend engineer with 10+ years of shipping web apps, mostly with React, Vue, and lately TypeScript. I enjoy making architecture calls, pushing for better performance, and helping other devs grow. These days I use Claude, Copilot, and GPT to rethink how my team writes and ships code — from automated accessibility audits to locale workflows that save hours of grunt work. Looking for a senior or lead frontend role where I can do work that matters.

SKILLS

Frontend: React, Vue 3, TypeScript, JavaScript (ES6+), Next.js, Angular, Redux/Vuex, Tailwind, SASS, Single SPA, RWD

Backend: Node.js, NestJS, GraphQL, REST APIs, PHP, Laravel, MySQL, MongoDB, Redis, Prisma

AI & Automation: Claude, Claude Code, MCP Integrations, GitHub Copilot, Copilot Studio, Agentic Workflows, Axe-core, Playwright

Tools: Git, Harness CI/CD, Turborepo, Electron, Keycloak, Firebase, Power Platform

EXPERIENCE

Senior Consultant

Oct 2024 – Present

Xebia IT Architects, Chennai (Remote)

- Working on a loyalty platform expansion across European markets. Stack is Vue 3, Node.js, and GraphQL with Harness handling CI/CD.
- Created an accessibility copilot agent using Axe-core and Playwright that catches violations, opens GitHub issues automatically, and assigns them to Copilot for fixes. Pushed accessibility scores past 90 on multiple pages.
- Wrote an agent skill that reads translations from a CSV and applies them across 30+ locale files in the repo. Eliminated hours of manual work for devs every sprint.
- Set up workflows with Claude and GitHub Copilot that enforce code quality standards and speed up how the team ships features.

Lead Software Engineer

Jul 2021 – Oct 2024

Virtusa Corporation, Chennai (Remote)

- Led the architecture and development of a hackathon platform in React and Redux where users could create, run, and manage hackathons end to end.
- Wired up Keycloak auth with GraphQL and added theme customization through CSS variables and JS in an Angular app.
- Reworked a retail app's search from single facet to multi facet filtering, all on the frontend. Cut server requests by 20% with zero backend changes.
- Introduced Redis caching that kept response times fast even during peak traffic with thousands of requests per second.

Associate – Projects

Jan 2020 – May 2021

Cognizant Solutions, Chennai (Remote)

- Wrapped 30+ legacy Flash apps in Electron so the business could keep running after Adobe pulled the plug on Flash support.
- Plugged micro frontends into an existing Vue.js app using Single SPA, making it easy to reuse widgets across teams.
- Set up a custom config service that loads environment settings before the app bootstraps and passes them through Vuex.

Software Development Engineer

Aug 2018 – Nov 2019

Colan Infotech, Chennai

- Wrote a room suggestion service in Node.js for a resort platform that recommends rooms based on availability and proximity to the front desk.
- Added an SVG editor to a Vue.js app so guests could browse a resort map and book rooms visually.

Software Development Engineer

Apr 2016 – Jul 2018

Trenmax Software Solutions, Chennai

- Put together an interactive dashboard in PHP for a health institute to handle appointments, case files, and reporting.
- Set up data sync with QAD using Laravel queues and wired up Firebase push notifications for an internal employee portal.

EDUCATION

Bachelor of Engineering (B.E), Electrical and Electronics

2011 – 2015

DMI College of Engineering
